Areas of Interest

- **Ambulatory Research:** The use ambulatory research combining high resolution surveys and biometric sensors collecting data continuously to understand how social experiences affect life quality, satisfaction, and health processes.
- **Social Networks:** The use of social network data to understand how individuals become connected into groups that support positive or negative behaviors.
- **Social Neuroscience:** The use of tools and techniques from neuroscience to shed light on social perception and risk-taking behavior, with an emphasis on how social context moderates neural processing.
